

Nerdy Critters

For this project, I wanted to make multifunctional glasses holders with unique designs. Therefore, I decided to make two sand-casted animal shaped glasses + jewellery/trinket holders, a bear and a Shiba Inu (which apparently looks like a cat) out of bronze and aluminium.

I made the initial prototype from playdough, then the sandcasting mold on the 3D printer.

Initial prototype made from playdough since it is easily moldable & modifiable
