Nerdy Critters

For this project, I wanted to make multifunctional glasses holders with unique designs. Therefore, I decided to made two sand-casted animal shaped glasses + jewellery/trinket holders, a bear and a Shiba Inu (which apparently looks like a cat) out of bronze and aluminium.

I made the initial prototype from playdough, then the sandcasting mold on the 3D printer.

Progress photos of me working in the Foundry

Initial prototype made from playdough since it is easily moldable & modifiable
